

SafetySpect

Our Science Your Safety

CERTIFIED CLEAN

SafetySpect's **Contamination and Sanitization Inspection (CSI)** device allows cleaning auditors to quickly, safely, and easily visualize and document the presence of potentially harmful contamination after cleaning. It works on high-touch and high-risk surfaces in real-time. The handheld fluorescence imaging scanner is non-contact, and no fluorescent dyes or reagents are required for operation.

WE SEE

THE INVISIBLE

OUR SCIENCE, YOUR SAFETY

The best of **modern sanitization** tech in one easy-to-use handheld system:

- Advanced, **real-time optical imaging** with AI segmentation and edge computing
- **Detect invisible organic residue:**
 - Fecal matter contamination, leafy vegetable residue, fats and oils
- Guided auditing and Quality Assurance
- Reduce the likelihood of illness outbreaks and recalls, reassuring customers and staff
- Ensure compliance with regulations

ABOUT SAFETYSPECT

We are dedicated to creating a safer environment on a planet facing unprecedented hygiene and health risks. We address critical gaps in environmental safety monitoring, where traditional methods often fail to prevent cross-contamination and disease outbreaks. Our technology delivers advanced, yet practical, systems that increase safety across industries. **SafetySpect products are manufactured in the USA.**

WHY THE WORLD NEEDS CSI

❖ INSTANT DETECTION AND DOCUMENTATION

CSI targets unseen sources of contamination that remain after traditional cleaning. It measures overall contamination levels and creates customized reports, making it suitable for any industry.

❖ EASE AND SPEED

With our touch screen, light weight, battery operated and rechargeable handheld system, cleaning staff can do their job thoroughly, efficiently and confidently. By utilizing edge computing, the device provides actionable insights in real time. Data is also instantly stored in an accessible platform.

❖ DYNAMIC RISK ASSESSMENT

The CSI system generates customized reports to highlight areas in your facility that are frequently contaminated, allowing managers to pinpoint which spots need attention. This insight helps cleaning teams focus on high-risk areas, leading to more effective and efficient cleaning processes. The longer you use the CSI system, the more valuable it becomes in maintaining a clean and safe environment.

❖ CUSTOM SANITATION STANDARD OPERATING PROCEDURES (SSOP) INTEGRATION

Experience seamless data and task management with CSI technology's managerial web dashboard. It integrates all critical data directly onto a relevant floor plan, enhancing efficiency and oversight across your operations.
